

BE SAFE

WHILE USING LADDERS

- Inspect all ladders BEFORE USE for deficiencies like broken rungs.
- Remove any damaged ladders from service.
- Be sure the ground is stable when setting up a ladder.
- While ascending a ladder, face it and have both hands free so you can grasp it properly.

We know there's a lot there to remember, but when you practice safety while working with a ladder, you reduce your chances of an injury.

STAY SAFE, EVERYONE!
